About Me

I am a fullstack software engineering graduate with hands-on experience building end-to-end web applications. Through the REVOU Full-Stack Software Engineering Program, I developed frontend solutions using React, Next.js, and Tailwind CSS, and built backend systems with NestJS, PostgreSQL, and Prisma. As my final project, I delivered a fullstack online movie ticketing application where users can sign up, sign in, browse movies, select seats, purchase tickets, and view ticket history, while administrators manage movies and seat availability through full CRUD operations. This project strengthened my skills in RESTful API development, authentication, database design, and scalable application architecture. I am eager to contribute to a collaborative development team by building reliable, maintainable, and user-focused solutions.

Skills

Technical Skill: HTML, CSS, Tailwind CSS, JavaScript, TypeScript, React, Next.js, Vite, NestJS, PostgreSQL, Prisma, Swagger UI, NodeJS, Postman

Soft Skills: Problem-Solving, Communication, Adaptability, Collaboration, Design-Thinking, Critical Thinking, Teamwork

Language : Indonesia, English

Working Experiences

E-Commerce MamaBear – Virtual Internship RevoU X MamaBear

May 2026 – June 2026

I developed an e-commerce website for MamaBear, a brand focused on products for pregnant and nursing mothers, utilizing React and Next.js to enhance front-end responsiveness. I implemented Sign-Up and Log-In authentication pages, which significantly improved user access and security through the integration of robust protocols with Nest.js. Additionally, I created a comprehensive product catalog showcasing a diverse range of items, leading to a noticeable enhancement in user engagement by employing user-centered design principles. Furthermore, I collaborated with back-end developers to integrate APIs for data retrieval, contributing to the project's timely completion through effective communication tools.

Project Experiences

Product Requirement Document Implementation – WeRent / Frontend Developer

Apr 2026

I was responsible for developing key features on the WeRent platform, including the CartPage and ShipmentPage, utilizing React and TypeScript while implementing JWT authentication to ensure secure transactions. I effectively implemented the PaymentPage, focusing on creating a responsive design using Tailwind CSS to enhance user experience during the checkout process. Additionally, I designed the OrdersPage and OrderDetail to create intuitive layouts that improved user navigation through order management features.

TiBooth Movie Ticketing Website, Revou Fullstack Software Engineer

Dec 2025 – Jan 2026

I architected and developed a comprehensive end-to-end movie ticketing platform, integrating a high-performance Next.js frontend with a modular NestJS backend. I designed a relational database schema using Prisma ORM to manage complex many-to-many relationships, specifically for dynamic seat availability, synchronized showtimes, and user booking histories. To ensure system security, I implemented JWT-based authentication, role-based access control (RBAC) for administrative CRUD operations, and secure password hashing using Bcrypt. By structuring the backend into specialized domains (Auth, Users, Movies, Showtimes, and Seats), I created a scalable RESTful API that maintains strict data integrity through automated input validation and standardized DTOs.

Education

RevoU Full-stack Software Engineering

July, 2025 – Jan, 2026

Completed an intensive 29-week Full-Stack Software Engineering bootcamp covering frontend, backend, and fullstack development through hands-on projects

Final Project: TiBooth Movie Ticketing Website

This project is a fullstack movie ticket booking web application that provides a seamless reservation experience through an integrated frontend and backend system. The platform allows users to browse movie catalogs, view real-time theater schedules, select seats, and manage bookings through a dynamic user interface.

Universitas Surabaya

July, 2018 – Aug, 2024

IPK: 3.2

Fakultas Hukum

Certification:

1. [Full stack Software Engineer](#)

Issued by: RevoU

Issued Date: 06 June 2026

Credential ID: NSE24-2026-06-001
